

Course "Technology Forecasting and Researching Future"

Svetlana Shchelokova from Lomonosov Moscow State University visited the course "Technology Forecasting and Researching Future" was held by Dmitry Kucharavy on July 4-8, 2016 at Politecnico di Milano. The course provides theoretical and practical skills about the modern methodologies for technological forecasting and prediction of system evolution. It covers a set of methods and techniques facilitating study about future changes, starting from problems of forecasting, existing solution for prediction and their limitations. Emerging approaches for long-term forecasting will be presented, with details about their main features, advantages and limitations in contexts of decision making and knowledge management.
